Profile

A highly engaged and creative web developer based in Helsingborg. Graduated in June 2025 from a vocational college with a focus on .NET web development. I have a strong interest in personal and mental growth and continuously strive to improve both my physical and mental health through good nutrition and regular training 3 4 times a week. This has in turn contributed to increased creativity and focus, especially within programming and development.

From an early age, I have had a strong interest in technology, especially computers, which strongly influenced my choice of education when I started programming for the first time. After my graduation, I am now seeking the opportunity to kickstart my career as a junior developer in a competent team where I can further develop my skills and at the same time contribute real value to the company.

Practical Experience

During my education, we had a six-month internship period where we were responsible for finding our own placement (LIA) to expand our practical skills. I had the opportunity to join a company called Effectsoft in Halmstad, an IT consultancy firm for system developers.

What I valued about Effectsoft was their primary focus on the .NET stack, which allowed me to broaden my expertise in .NET development, particularly within the Blazor framework. I gained a great understanding of how a company in the tech industry operates through daily stand-ups, weekly lunch meetings, and, most importantly, by being part of a real customer project alongside my supervisor. The project was built using Blazor Server with the Blazorise library, integrated with the open-source framework ABP.IO.

Since Effectsoft was my first experience working in a professional team, using professional project management tools was new to me, as I had previously only used GitHub Projects. During my time there, I learned to use Jira and Bitbucket for version control, branch management, documentation, and time tracking.

Technical Skills

Frontend
 HTML & CSS, JavaScript, React, TypeScript, Blazor(Server/WebbAssembly)

Backend
 C# (.NET, ASP.NET Core, MVC), Node.js

API & Database
 REST-API:er (Swagger), NoSQL, MySQL, SQL Server, Azure Cosmos DB

CMS
 Umbraco

DevOps / Tools Agile Methodologies, GitHub Projects, Jira, Bitbucket

Work Experience

May 2025 – Part-time
 Shop Assistant, ICA Söder Helsingborg

After my graduation, I have been working part-time at ICA Söder. The tasks are varied and include restocking and displaying goods, cashier work during high customer flow, and customer service where I help customers find what they are looking for in the store.

July 2020 – August 2023
 Warehouse Worker, Swea Rör & Stål AB

Responsible for handling deliveries using a forklift. When not operating the forklift, I worked at machines cutting pipes and piston rods according to customer specifications. The work required high accuracy, quality control, and good planning skills to ensure that assignments were carried out correctly.

June 2017 – July 2020
 Shop Assistant, Gekås Ullared AB

Working at Gekås gave me broad experience in customer service, merchandising, and maintaining order in a retail environment. I worked in several different departments such as the checkout, warehouse, and sales floor. The role was highly social and developed my ability to meet and assist customers throughout entire work shifts.

June 2016 – August 2016
 Factory Worker, Västkustfilé / Maenor

My first real job where I tested my stress resilience in a professional environment. The work was largely team-based but also required independence. The tasks mainly consisted of packaging goods, deliveries, and some machine operation.

Education

EC Utbildning, Halmstad
August 2023 – June 2025
Vocational Higher Education Degree – Web Development .NET

Aspero Idrottsgymnasium
2014 – 2017
Social Science Program with National Sports Specialization (Handball)
